Expert Landscape Upgrade
Corrections to manual that reflect new features

We have compressed the program to fit on (1) 360K and (1) 720K disk.

The SAFE option mentioned on page 5 has been removed.

Select your printer type from the Installation routine. If you wish to change your printer type after installation, run Install again. Select your new printer type, then choose the Update command.

Activate your menu commands by pressing ALT + (the first letter of the menu title). Example: **ALT + F** to get the File menu. The status bar at the bottom of the screen offers command descriptions and hints.

The Line command in the Tools menu has been updated to draw lines in all directions. Simply click on a point and drag your mouse in any direction, release the mouse button when complete.

The Line style in the Tools menu has been changed, it now offers four new line types: Solid, Dotted, Thick Dotted and Thick Solid.

Expert Landscape now offers a color dialog box. Select the Paint command from the Tools menu. Now click on the Color, BkColor or Pattern buttons. This allows you to select foreground, background and pattern colors at the same time.

The Cut and Copy commands saves the marked image or object to memory. Use the Paste command from the Edit menu to place your objects back on to your layout *after* using the Copy or Cut command.

Expert Landscape now contains a dedicated Eraser command in the Edit menu. Activate this command and drag your mouse pointer over the images you wish to erase.

If you are in the Objects selection process and you wish to cancel, click on the Cancel button or press your **Esc**ape key. The manual may mention an Escape button, this has been replaced with the new Cancel button.

The Text command on the Edit menu has been set up to allow simple straightforward text insertion on your layout. First select Horizontal or Vertical, then choose the size of the text: Small, Medium or Large. Type in the text and place it anywhere on your layout.

The Expert Landscape's Plant Encyclopedia mentioned on page 33 has been updated. New current plant information has been added to keep the program as up-to-date as possible. You may edit your data PLANT.DAT in any DOS or Windows text editor.

Please call our new FREE technical support number: **(305) 567-9990** if you have any questions or comments, and thank you for choosing Expert Software.
